

Experiment results: layout preview*No empirical values entered*

The three grids are candidates for the body results section. RARE is the candidate method; Ctx. trust denotes contextual-trust-linear. U is future quality-complete-cost utility; ΔA is assignment-change rate. A dash is unfilled; planned entries use stream-level 95% intervals.

Table 2: Online service and drift adaptation on PeerSelect (RQ3–RQ4; H3). Rows share the same local menu, feedback delay, arrival rate, and resource budget.

Scope. ArtifactRole and PeerSelect are complementary tracks, not two interchangeable benchmarks. Independent-root and drift breakdowns, secondary metrics, denominator rules, and full execution cards remain in the experiment manifest. Benchmark qualification and baseline qualification remain open; this preview changes presentation only.
